

Parker Trutec – Urbana, Ohio Plant Announces Internal Building Expansion and New Solid Lubricant Change-On-Edge Paint System.

Urbana, Ohio, April 2, 2018 – Parker Trutec Inc. has recently announced that the Urbana, Ohio facility completed an internal building expansion. This building expansion was required for the addition of a third Solid Lubricant Paint Line to the coatings application facility located at 4795 Upper Valley Pike. This new Solid Lubricant Paint Line compliments two other Solid Lubricant Paint Lines that are already in place at Parker Trutec and is expected to launch mass production in May 2018.

The state of the art Solid Lubricant Paint Line is a fully automated chain-on-edge line which will continue to allow an increase in production capacity for both existing and new customers and will also allow Parker Trutec Urbana to achieve tighter industry quality standards for steel, galvanized, and aluminum substrates. This new line features 25 pound rated racks and a processing paint window of 12”W x 30”H. Parker Trutec works with a variety of paint suppliers both domestically and internationally, including Parker Trutec’s Parent company Nihon Parkerizing proprietary full line of Defric paints. Additionally, Parker Trutec has the ability to metal prepare customer parts for the painting operation consisting of various shot-blast capabilities along with 3 automated phosphate lines providing zinc, manganese and iron in various forms.

Parker Trutec Urbana started operations in 1988, is a full service surface coating operation catering to a wide variety of customers with a wide range of specifications and requirements for Zinc, Manganese and Iron Phosphate, Bonderlube, Solid Lubricant / Defric Coatings and Electrocoating.

Parker Trutec Inc. is a subsidiary of Nihon Parkerizing Co., Ltd. of Tokyo Japan. Nihon Parkerizing founded over 85 years ago is widely recognized as a world leader in heat treating and metal coatings technology with 87 global facilities in 16 countries.
